# *How smart are our cities?*

# Foreword

The Indian Government has truly stepped on the accelerator with respect to smart cities by announcing an initiative to convert 100 cities to smart cities by 2018. This is imperative because cities are already bursting at the seams, and India's growth of population has to be accompanied by a commensurate growth in urban infrastructure. While numerous state governments have announced their smart city plans, the approach to become a 'smart city' has been different. Some cities have been extremely successful and are rated extremely well in many social, economic and urban components, while some have been found wanting.

If India has to truly derive the full potential of the idea of 'smart cities', it is crucial to do a comprehensive assessment to reveal a clear situation of the current state of the identified smart cities with respect to defined parameters. Cities can look at their current state, and benchmark themselves against the best ranked cities.

It is in this context, that Express Computer, one of India's most respected IT publications with a focus on e-governance and enterprise technology, has partnered with PwC, a respected analyst firm with huge domain expertise in smart cities, to launch the second edition of the report, 'Assessment of Indian Cities for Smart City Transformation'.

In this year's report, performance based assessment has been conducted for 20 major Indian cities in terms of the operational effectiveness of the urban services being delivered to its citizens. More importantly, the report assesses the effectiveness of the strategies of 10 cities in a period one year, which gives an indication of the approach for other cities to emulate.

The researchers have employed a combination of analytical and comparative methods of research in this report. The methodology includes desk research, internal assessment and the analysis of the quality of life in the city on the basis of parameters like power, water, transportation, hospitals, disaster management, administration, etc. The information has been obtained mainly from research papers and various public reports and statistics, and through various resources owned by the government and the city administration.

We believe that this assessment will help policymakers and city administrators to understand current and emerging needs of the city and assist in developing strategies to make it more attractive, prosperous and sustainable while advancing towards the wellbeing of its citizens and communities. The city-assessment, compiled in this report, is expected to serve as a benchmark for further driving the conversation on smart cities.

Smart cities are truly an opportunity to transform India, and we believe that this report will help cities accelerate towards their goal of significantly improving the quality of life for the common citizen.

# 1. About the assessment

## An overview

Our planet, which is inhabited by over 7 billion people, is in the middle of a colossal change. The pressure of catering to the needs of the ever-increasing population and the constant rise in the demand for basic amenities such as water, energy, infrastructure and a clean environment are having a tremendous impact on the ecosystem. Urbanisation is propelling social and environmental challenges. In India, 31% of the population currently lives in cities, with people migrating to urban areas for better employment opportunities, healthcare and educational facilities as well as improved liveability and a higher standard of living. This trend is expected to continue in the coming years, with city population growth by 2030 projected at almost 50%. Cities are characterised by strained infrastructure which manifests itself as power cuts and water shortages, a high cost of living, and unaffordable real estate, resulting in urban sprawl and slums, and a high volume of traffic that causes pollution and delays.

The motivation to become a smart city is driven by the need to surpass the challenges posed by traditional and conventional cities. Overcoming these critical challenges in a systematic manner is critical for cities to attain sustainable and progressive growth, while meeting the needs of all its stakeholders: citizens, businesses and governments.

Acknowledgment of the fact that the real India resides in large as well as small cities has led to the proposition of developing 100 smart cities. This will serve to ease the pressure of migrant population in existing urban enclaves and ensure that the struggles associated with urban living (slums, smog, sewage and congestion) become a thing of the past.

In our previous report, 'How smart are our cities?' which was released at the 17th edition of the Express Technology Sabha, we had deliberated on the various aspects of the smart city concept and presented a competitive assessment of the existing infrastructure as well as the various social factors of 10 major Indian metros and leading cities to reveal how the city operates and services its citizens and provide a clear picture of its current state to policymakers and city administrators. The report essentially aimed to understand the current and emerging needs of cities and assist in developing strategies to make them more attractive, prosperous and sustainable while advancing towards the well-being of their citizens and communities.

The report also highlighted the importance of developing an effective transformation and implementable strategy dovetailing the efforts of all the city actors to achieve the future development of sustainable and competitive cities that addresses social, environmental and economic issues in a holistic manner and provide opportunities to all their stakeholders and inhabitants.

In this year's report, performance-based assessment has been conducted for 20 major Indian cities in terms of the operational effectiveness of the urban services being delivered to the citizens. The 10 cities analysed in the previous report have also been included in the analysis to assess the effectiveness of their start-to-smart journey over the period of one year. A comprehensive assessment of the current situation of each city is conducted using various social, economic and urban components and metrics. One of the main objectives of this assessment was to reveal the current situation of these cities in terms of the selected parameters. This

assessment will help policymakers and city administrators to understand the current and emerging needs of the cities and assist in developing strategies that make the cities more attractive, prosperous and sustainable.

The city assessment compiled in this report is expected to further drive the conversation on smart cities.

From the time the first Tech Sabha previous report was released, considerable progressive development has taken place in terms of addressing city challenges and bringing about the required changes. The new government at the Centre has embarked on an ambitious journey to transform the landscape of India by setting up several smart cities across the country.

The Indian government has undertaken concrete steps to make smart cities a reality with the launch of '**India's 100 Smart Cities Challenge**' in 2015, where 100 aspirant cities competed with each other to come up with holistic plans for becoming model cities.

The first round of the Smart Cities Challenge received a tremendous response across the nation, with city administrators and government officials of participating cities enthusiastically engaging with citizens to shape a clear vision which captures each city's strategic ambition. Workshops, webinars, fairs, walkathons and social media were leveraged across cities to stimulate discussion on the possible avenues for merging the concept of sustainability with the smart city framework to improve the quality of life for city inhabitants. Several lakhs of responses were received from citizens regarding key focus areas, pain areas and prospective solutions to make their city smarter and more liveable.

In Round 1, the 100 participating cities were evaluated on a set of stringent parameters and guidelines. The first list

of 20 smart cities for the Smart Cities Challenge was released in January 2016. These 20 cities would be the first in line to receive funds to achieve the goal of transforming into a smart and sustainable city that can address social, environmental and economic issues in a holistic manner while making the most of future opportunities. These cities are currently improving upon their proposals for necessary compliance on the basis of counsel from the panel of experts who evaluated them. They will be rigorously monitored to ensure adherence to the committed timeline for the implementation of the smart city proposals.

The list of the first 20 cities that were selected:

1. Bhubaneswar, Orissa
2. Pune, Maharashtra
3. Jaipur, Rajasthan
4. Surat, Gujarat
5. Kochi, Kerala
6. Ahmedabad, Gujarat
7. Jabalpur, Madhya Pradesh
8. Vishakhapatnam, Andhra Pradesh
9. Solapur, Maharashtra
10. Davangere, Karnataka
11. Indore, Madhya Pradesh
12. New Delhi Municipal Corporation
13. Coimbatore, Tamil Nadu
14. Kakinada, Andhra Pradesh
15. Belagavi, Karnataka
16. Udaipur, Rajasthan
17. Guwahati, Assam
18. Chennai, Tamil Nadu
19. Ludhiana, Punjab
20. Bhopal, Madhya Pradesh

In a bid to ensure equity in opportunities to all states and union territories, a list of 23 additional cities was prepared. These cities were given an opportunity to participate in a fast-track programme to improve their proposals and resubmit them for evaluation by 30 May 2016. Out of these, 13 cities were selected to compete in the next cycle of the India Smart Cities Challenge.

The list of fast-track cities that were selected:

1. Lucknow, Uttar Pradesh
2. Warangal, Telengana
3. Shimla, Himachal Pradesh
4. Chandigarh, Chandigarh
5. Raipur, Chhattisgarh
6. New Town Kolkata, West Bengal
7. Bhagalpur, Bihar
8. Panaji, Goa
9. Port Blair, Andaman and Nicobar Islands
10. Imphal, Manipur
11. Ranchi, Jharkhand
12. Agartala, Tripura
13. Faridabad, Haryana

The remaining cities were provided the chance to compete in Round 2 of the challenge, where the revised proposals were submitted on 30 June 2016.

The results for Round 2 were released in September 2016 where the names of 27 cities in 12 states were announced. The government has proposed a total investment of Rs. 144 742 crores for 60 cities under Smart City Project.<sup>1</sup>

The third list of cities that were selected:

1. Amritsar
2. Kalyan
3. Ujjain
4. Tirupati
5. Nagpur
6. Ajmer
7. Aurangabad
8. Hubli
9. Gwalior
10. Hubli-Dharwad
11. Jalandhar
12. Kalyan-Dombivli
13. Kohima
14. Kota
15. Madurai
16. Mangalore
17. Namchi
18. Nashik
19. Rourkela
20. Salem
21. Shivamogga
22. Thane
23. Thanjavur
24. Bangalore
25. Vadodara
26. Vellore
27. Kanpur
28. Agra
29. Varanasi

1. <http://www.smartcitiesprojects.com/union-ministry-released-third-list-27-cities-12-states/>

It is to be kept in mind that the concept of a smart city must be merged with sustainability for the welfare of people and our planet as a whole. The marriage of innovation with technology will go a long way in optimising the management of infrastructure and resources and, at the same time, focussing on inclusiveness and a greener environment. Smart sustainable cities will lay the foundations for a better future—a future where cities care for people, the earth, air, water and the environment.

While our previous report highlighted urbanisation as a national-level concern and focussed on a competitive assessment of 10 Indian cities to empower city governments to take proactive steps to transform for balanced growth, the current report goes a step further in evaluating 10 more cities in addition to the progress of the previous 10 in terms of utilisation of technology, existing and planned infrastructure investments to provide a higher quality of living to residents and a positive investment climate for businesses, and allowing the maximisation of resource utilisation and transparency for governments. We believe this report will provide the right impetus to policymakers and stimulate progressive debate on sustaining rapid urbanisation across India.

### City assessment approach

We adopted a structured approach that involved the detailed assessment of fundamental and critical data vectors for smart city transformation and took cognisance of city readiness to achieve the smart city vision. For the 10 cities of the previous report, the smart city proposals available on the Ministry of Urban Development website were studied to understand the progressive initiatives taken/proposed and these were considered in the readiness vector. In order to develop

a comprehensive picture of individual cities, every city was assessed on the basis of social, economic and urban characteristics. Further, several data vectors, as defined in subsequent sections of this report, were explored. The research methodology included three core activities to build and validate various parameters and findings as part of the study.

### Desk research

Our research team started by identifying the research goals, information areas, boundaries, information reliability and validation procedures. City components that are critical to smart city transformation were identified and emphasis was laid on assessment and investigation around them. These components were then mapped with the city departments and agencies responsible for their operations and management. A mapping exercise was conducted to develop a clear scope boundary and to focus efforts around the right areas only.

The team relied on information and literature from the following sources:

- Various Indian government information portals

- City-specific government websites
- City-specific department websites
- Our previous report ‘How smart are our cities’
- Smart city proposals available on the Ministry of Urban Development website
- Research papers available publicly
- Public reports and statistics, surveys done by various analyst organisations

### Internal assessment

Smart city transformation entails the integrated development of various sectors that contribute to city operations and the delivery of competent services to city inhabitants. These sectors are also interconnected. Improvement in one enables improvement in others and vice versa. We looked at the journey of the global cities that have embarked on a similar transformation and the sectors that played a vital role in this transformation. We rationalised our findings within the Indian city administration set-up and finalised the following key sectors as part of the social, economic and urban review of each of the cities.

| Social              | Urban                   | Economic              |
|---------------------|-------------------------|-----------------------|
| Health              | Power                   | Municipal corporation |
| Education           | Water                   | Sustainability        |
| Safety              | Transport               |                       |
| Disaster management | Sewerage and sanitation |                       |
|                     | Solid waste management  |                       |
|                     | Storm water drainage    |                       |

Detailed sectoral analysis was conducted and across each identified sector, and metrics were developed for smart city benchmarks and target operating values. A city's current performance level and service delivery mechanism were then given a score on the basis of its compliance to and deviation from these benchmark and target values. We identified 63 benchmarks which have been assessed and rated across three data vectors:

- Current status (includes the smart city proposal interventions as preparedness for the current report)
- Technology intervention
- Contribution to smart city

Out of these 63 benchmarks, 57% depict an urban overview; 25%, a social overview; and the remaining provide an economic overview of the cities. During the assessment, care was taken to use the most recent data available.

- Current status: Defines the current level of city performance and service delivery across each of the benchmark. In the current report, it includes the smart city proposal interventions as preparedness to transform.
- Technology intervention: Defines the use and state of technology solutions for city operations and the delivery of various city services. It includes the interventions proposed in the respective city's smart city proposals.
- Contribution to smart city: Defines the vitality index and the contribution made by individual benchmarks in city operations.

These data vectors are assessed on a scale of one to three, three being the highest rating and one the lowest. Weights have been assigned to these data vectors on the basis of their significance and contribution to help assess the preparedness of the cities.

| Data vector/rating                | Rating 1   | Rating 2  | Rating 3                           |
|-----------------------------------|--|---|------------------------------------|
| <b>Current status</b>             | High service delivery  | Medium service delivery   | Low service delivery               |
| <b>Technology intervention</b>    | High technology involvement (for city monitoring and control points) | Medium technology involvement (limited to city monitoring only) | Low technology involvement         |
| <b>Contribution to smart city</b> | Essential to a smart city, fundamental requirement                   | Significant to a smart city                                     | Least significant for a smart city |

The final score has been derived as per the following formula:

$$\text{Final score} = (\text{Current status} * 0.3) + (\text{technology intervention} * 0.3) + (\text{contribution to smart city} * 0.4)$$

High weightage is assigned to 'contribution to smart city' to give a clear view of critical components that need immediate attention and efforts. Further, we have provided a list of key parameters that are required to be assessed by policymakers and city administrators before embarking upon the smart city transformation journey.

### Rationalisation of assessment results and city rankings

We rationalised our assessment findings by carrying out a micro-level analysis of the initiatives taken by individual departments of the cities in their respective sectors across all identified benchmarks. To substantiate our findings and ratings against the benchmarks, we examined in detail the kind of ground-level initiatives and mechanisms being currently utilised. We have developed a toolkit that has helped us standardise the data vectors across all identified cities and benchmarks. It has consolidated scores on a scale of one to ten for each benchmark. Score of all the

benchmarks across the three sector Social, Urban, Economics have been added to arrive at the final city rankings.

# 2. City Ranking's and Assessments

Our previous report, 'How smart are our cities?' released at the 17th edition of the Express Technology Sabha provided a competitive assessment of the existing infrastructure as well as various social factors of 10 major Indian metros and leading cities – Bangalore, Pune, Jaipur, Chennai, Kolkata, Delhi, Mumbai, Hyderabad, Ahmedabad and Surat. Various aspects of the smart city concept were deliberated upon in the report to reveal how the city operates and services its citizens, while providing a clear picture of its current state to policymakers and city administrators.

## Ranking and Summary of cities in the previous report

| Cities    | Total Score | Rank |
|-----------|-------------|------|
| Bangalore | 6.697       | 4    |
| Pune      | 6.581       | 8    |
| Jaipur    | 6.581       | 8    |
| Chennai   | 6.916       | 2    |
| Kolkata   | 6.618       | 7    |
| Delhi     | 6.775       | 3    |
| Mumbai    | 6.626       | 5    |
| Hyderabad | 6.202       | 9    |
| Ahmedabad | 6.625       | 6    |
| Surat     | 6.994       | 1    |

| City/utilities          | Bhopal | Gurgaon | Bhubaneswar | Indore | Kochi | Noida | Lucknow | Chandigarh | Ludhiana | Dehradun |
|-------------------------|--------|---------|-------------|--------|-------|-------|---------|------------|----------|----------|
| Power                   | 7.87   | 6.97    | 8.17        | 8.07   | 8.47  | 6.97  | 8.07    | 8.07       | 7.67     | 7.67     |
| Water                   | 6.50   | 6.67    | 8.00        | 7.50   | 7.33  | 6.94  | 7.00    | 7.00       | 7.00     | 6.67     |
| Safety                  | 6.83   | 7.58    | 6.58        | 7.33   | 8.08  | 7.08  | 6.83    | 6.83       | 7.08     | 6.83     |
| Disaster management     | 6.60   | 6.40    | 7.00        | 6.80   | 7.20  | 6.40  | 6.60    | 6.60       | 6.60     | 6.60     |
| Transport               | 6.15   | 5.59    | 7.04        | 7.15   | 6.59  | 5.81  | 6.93    | 6.93       | 5.70     | 5.70     |
| Sewerage and sanitation | 5.67   | 5.67    | 6.33        | 6.67   | 6.33  | 6.00  | 6.67    | 6.67       | 5.67     | 5.33     |
| Solid waste management  | 5.60   | 5.80    | 5.80        | 6.60   | 5.80  | 5.60  | 6.40    | 6.40       | 5.00     | 5.00     |
| Storm water drainage    | 5.22   | 4.89    | 6.22        | 5.56   | 5.89  | 5.89  | 6.22    | 6.22       | 4.22     | 4.56     |
| Health                  | 6.67   | 8.33    | 8.00        | 8.00   | 8.00  | 8.00  | 8.00    | 8.00       | 6.67     | 8.00     |
| Education               | 6.00   | 6.75    | 6.75        | 6.50   | 6.00  | 6.75  | 7.50    | 7.50       | 6.25     | 7.25     |
| Municipal corporation   | 6.05   | 6.33    | 7.76        | 7.67   | 7.81  | 5.62  | 6.33    | 6.33       | 6.90     | 5.19     |
| Sustainability          | 5.00   | 5.25    | 6.00        | 6.58   | 7.08  | 5.50  | 5.75    | 5.75       | 5.50     | 5.50     |
| Total                   | 6.179  | 6.353   | 6.971       | 7.035  | 7.049 | 6.381 | 6.858   | 6.858      | 6.741    | 6.880    |

In this year's report, we have conducted performance-based assessment for additional 10 Indian cities in terms of the operational effectiveness of urban services being delivered to the citizens.

## Ranking and Summary of cities in Current Report

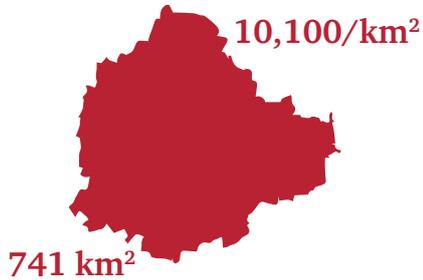

| Cities      | Total Score | Rank |
|-------------|-------------|------|
| Bhopal      | 6.179       | 9    |
| Gurgaon     | 6.353       | 8    |
| Bhubaneswar | 6.971       | 3    |
| Indore      | 7.035       | 2    |
| Kochi       | 7.049       | 1    |
| Noida       | 6.381       | 7    |
| Lucknow     | 6.858       | 5    |
| Chandigarh  | 6.858       | 5    |
| Ludhiana    | 6.741       | 6    |
| Dehradun    | 6.880       | 4    |

# Overall assessment

## Services - Bangalore

Bangalore, the Silicon Valley city, has a consolidated score of 8.27 on power. BESCOM has taken number of initiatives for distribution of power, although there are frequent cases of outage in summers. In transport, the city has a consolidated score of 6.15, although there is a major shortage of means of public transport. BMTC buses form a major part of public transport as the metro has very limited coverage. In the areas of safety, disaster management, and sewerage and sanitation, the city has scores of 6.83, 6.60 and 6.67, which are slightly above average scores. Bangalore is required to considerably improve its technology intervention in solid waste management and storm water drainage. In overall sustainability, the city has a score of 5.75.

# Overall assessment

## Services - Pune

Pune, with a population of 31.24 lakh, spans an area of approximately 710 km<sup>2</sup>. The city has a consolidated score of 8.27 in power. In the areas of water, safety and disaster management, Pune has consolidated scores of 6.17, 6.58 and 7.00, respectively. The city has limited public transport facilities, and citizens have to rely on autos and cabs. The city is required to improve its technology intervention in these areas in order to further improve its service delivery to citizens. Pune has a consolidated score of 6 in the areas of solid waste management as well as sewerage and sanitation. With a score of 5 in sustainability, the city needs to considerably improve in the sustainability domains of air and noise pollution.

# Overall assessment

## Services - Jaipur

Jaipur, popularly known as the Pink City, spans an area of 111 km<sup>2</sup> and has a population of 30.46 lakh. In the power domain, Jaipur has a consolidated score of 8.17. The city needs to improve its consumer metering, billing and collection efficiency, and also take up progressive steps in the utilisation of renewable energy sources. In the areas of water, safety and disaster management, the city has consolidated scores of 6.67, 7.33 and 7 respectively. Jaipur is required to considerably improve its technology intervention in water and disaster.

# Overall assessment

## Services - Kolkata

Kolkata, nicknamed the ‘eastern gateway of India’, is the capital of the state of West Bengal. It is located on the east of the River Hooghly. Kolkata has a rich history and has India’s oldest port and the sole major riverine port. Kolkata has a population of 46.46 lacs. Kolkata has fared well in the health sector with a score of 8.33. The state of power is also good with a score of 8.07. The area where Kolkata lags is storm water drainage systems and solid waste management systems, with scores of 4.89 and 5.00 respectively. The water network in Kolkata also needs improvement. It scored a total of 6.17 in the water sector.

# Overall assessment

## Services - Delhi

New Delhi is the capital of India and has all the central government offices and courts. Delhi has a high percentage of green cover and is full of ancient monuments and is rich in Indian cultural history. It is a microcosm of the entire country. Delhi fares well in the power domain with a score of 8.37. The Municipal Corporation of Delhi had a healthy score of 7.62; healthcare also had a positive score of 7.67. The city lacks a robust storm water drainage system, resulting in a low score of 4.89 for the domain. Solid waste management also needs improvement as it scored a low 6.00 in the domain. Delhi's overall sustainability is very low at a score of 5.25.

# Overall assessment

## Services - Mumbai

Mumbai, the financial capital of India, is also the capital of the state of Maharashtra. With a staggering 18.4 million people, it is the most populous city in India. It is called an alpha world city and has the highest GDP among cities in Central, South or West Asia. Mumbai has scored the highest in the power domain with a score of 8.27. The city's municipal corporation has a healthy score of 7.48 out of 10. Healthcare is also good with a score of 7. The city is plagued by bad traffic conditions, which worsen during the monsoons owing to the extremely poor storm water drainage system throughout the city. This is the reason transportation and storm water drainage have scores of 5.93 and 4.89 respectively.

# Overall assessment

## Services - Hyderabad

Hyderabad is the capital city of the state of Telengana. It is known for its biryani and the fabulous wealth of the nawabs. In the last few years, it has become a rapidly growing IT hub. With a score of 8.17, Hyderabad scored the highest in the power domain. The city fared decently in the sectors of health, municipal corporation and safety, with scores of 7.33, 6.67 and 7.83 respectively. The areas of concern for the city include storm water drainage, which had a meagre score of 4.22. To race ahead in the future, the city needs to improve its transportation facilities, sewerage and sanitation and solid waste management.

# Overall assessment

## Services - Ahmedabad

Ahmedabad (the erstwhile capital of Gujarat) is the largest city of the state of Gujarat. With a population of more than 6.3 million it is the sixth largest city in India. It is the home city of our current Prime Minister, Hon'ble Shri Narendra Modi. The city boasts of the best management institute of the country and the best institute for design. It is used to be the Manchester of India owing to the existence of a large number of textile mills. However, the city is now known as the commercial capital of the state of Gujarat and is thriving in the service, IT and food processing sectors. It has scored the highest in the power domain, with a score of 7.97. The city has fared decently well in most of the other sectors, including municipal corporation, safety, disaster management, water and healthcare, with scores of 7.76, 7.58, 7.20, 7.00 and 7.00 respectively. The city needs to improve sustainability and solid waste management.

# Overall assessment

## Services - Surat

Surat, also known as the ‘Diamond City’, is one of the oldest diamond-cutting centres in the world. Further, 90% of the world’s rough diamonds are cut and polished in Surat. It also produces about 40% of India’s total man-made fabric. Moreover, its IT sector is also slowly picking up. Surat has scored exceptionally in the power sector, with a score of 8.67. Surat fared averagely in the domains of disaster management, municipal corporation, water and safety, with scores of 7.40, 7.48, 7.67 and 7.33. Surat lags behind in its storm water drainage systems, solid waste management systems, sewerage and sanitation. Transportation within the city is poor, which is reflected in the city’s score of 6.45. The overall sustainability score of Surat is 6.

# Overall assessment

## Services - Bhopal

Bhopal is rich in history and, at the same time, is also a flourishing modern city. It serves as the state capital of Madhya Pradesh. Bhopal scores maximum on the 'Power' parameter under the services it offers. Bhopal's Madhya Kshetra Vitaran is paramount in shaping this for the city. Power outages are frequent in old Bhopal, but the newer locales in Bhopal see relatively less frequent power cuts. The city performs at an average standing when it comes to disaster management, where it sees a consolidated score of 6.6. The city's performance is at the same level as that of most of the cities in this study. Although the score is not low, but bearing in mind the infamous Bhopal gas tragedy, the score could have been better. This score becomes a little more worrisome since the sustainability element of Bhopal is scored at a meagre 5. Most other services like municipal corporation, education, transport, sewage and sanitation for Bhopal stand in the 6+ range. Safety and water are the only services that score above the 6.5 mark. The city's scores average at 6.17.

# Overall assessment

## Services - Gurgaon

Gurgaon (formerly Gurgaon) is a rapidly developing city on the outskirts of the national capital. The city is seeing a massive inflow of multifaceted companies both from abroad and India. In sync with its posh image, Gurgaon scored highest on the health index of this study. The high rating of 8.33 is a direct consequence of the rising urban class in Gurgaon, which has led to big and small names in healthcare flocking to the city. The city scores above average in the power and safety sector; these have been the focus areas of the government owing to its bad past record in both sectors. The city's score on storm water drainage is below average, which is self-explanatory given the conditions during the monsoons. With scores of 6.4 in disaster management and 6.75 in the education sector, Gurgaon is an average performer in this category. Overall, the city scores 6.35 in this study.

# Overall assessment

## Services - Bhubaneswar

Bhubaneswar is the capital of the Indian state of Odisha. It is the largest city in Odisha and is an economic and religious centre in eastern India. The city, however, has an average score on most parameters of this study, with the highest score obtained by power and the municipal corporation of the city at 7.77 and 7.76 respectively. Most other parameters of the city are within the range of 6 to 7 points. The city scores low on hygiene parameters like storm water drainage and solid waste management. Overall, the city scores 6.97 and manages to secure a place in the average overall range of the study.

# Overall assessment

## Services - Indore

Indore is rich in history and is the most populous city in the state of Madhya Pradesh. It is often referred to as the commercial capital of Madhya Pradesh. Indore's proximity to Mumbai has ensured its position as a business hub for generations. Indore scores the highest in the power sector with 8.07, followed closely by healthcare with a score of 8.00. Disaster management in the city is reasonably good at a healthy score of 7.80. Water, safety and transport fared decently with scores of 7.50, 7.33 and 7.15 respectively. The city scored the worst on storm water drainage with a meagre 5.56. Indore needs to improve its education facilities and the solid waste management and sewerage and sanitation conditions in order to compete with the cities of the future. The overall score of the city is 7.03.

# Overall assessment

## Services - Kochi

Kochi is known as Queen of the Arabian Sea and has been an important spice trading centre for India from as early as the fourteenth century. From the pre-Islamic era, Kochi has maintained a trade network with Arab merchants. Kochi is also one of the major tourist destinations in India, and was ranked 6 by Outlook Traveller Magazine. It ranks the highest in the power sector, despite unexpected power outages in summer this year. It obtained a score of 8 in the domains of healthcare and disaster management. Kochi citizens feel safe in their city, which is why the city got a high score of 8.08 on safety. The city's storm water drainage continues to be a problem and it scored only 5.89 on the same. Solid waste management is also in a shambles as the city scored a meagre 5.80 in this domain. Kochi needs more educational institutions and needs to improve its transport facilities in order to compete in the smart city race. The overall rank of the city is 7.04.

# Overall assessment

## Services - Lucknow

Lucknow, also known as the City of Nawabs, is the capital of the most populous state of India, Uttar Pradesh. It is famous for its multicultural lifestyle and is very well known for its cultural and artistic history. It has been the seat of power for the Nawabs of Oudh/Avadh. Lucknow has the highest score in the healthcare sector. It has done reasonably well in the power sector. The efforts to have better surveillance in the city have assisted in improving the safety score of the city to 7.42. The city needs to improve its transportation and education facilities as they scored an average 6.96 and 6.08 respectively. Sewerage and sanitation and storm water drainage need immediate attention as they scored a meagre 5.44 and 5.56 respectively. The overall city rank is 6.85.

# Overall assessment

## Services - Chandigarh

Chandigarh is a union territory that serves as the capital of both Haryana and Punjab. Hailed as one of the most well-planned cities in the country, Chandigarh scored slightly above average on most of the parameters it was measured on. It was rated the highest on the power parameter at 8.07, and obtained an above average score of 6.6, 8, 7.5 in disaster management, health and education respectively. The lowest score for the city was for storm water drainage (6.22), which is contradictory to its image of being a well-planned city. This could be a consequence of the city's low score on sustainability (5.75). The city's overall score is 6.85 in this study.

# Overall assessment

## Services - Ludhiana

Ludhiana is the largest city of the state of Punjab and is the second largest city north of Delhi. It holds great socio-economic significance for the state, as is evident from the state's emphasis on power, which at 7.67 makes Ludhiana the highest scorer in this category. Like Chandigarh, sustainability and storm water drainage are the lowest scoring parameters for Ludhiana, which has scored above average on most other parameters like municipal corporation, safety and water. The score on healthcare is in the range of 6.5+. Overall, the city has an above average score of 6.18.

# Overall assessment

## Services - Dehradun

Dehradun is the capital city of the mountainous state of Uttarakhand. It lies in the Doon Valley of the Himalayas, in between the Ganges and the Yamuna. Dehradun is famous for its schools, earning it the title of 'the city of schools'. Dehradun has witnessed a very healthy growth rate in recent years. In our assessment, Dehradun earned a score of 6.83. In terms of safety, Dehradun fares well in disaster management; however, the city is plagued by a poor sewerage system. It has scored 7.11 on water, which is below standard and requires improvement. Storm water drainage has a score of 4.56, which is much below the benchmark. The lowest score (5.50) is for sustainability.

## Conclusion: Next steps

Our assessment of these 20 Indian cities indicates that most cities have robust infrastructure mechanisms in place to deliver fundamental services. However, a significant transformation is still required to take the experience and quality of liveability to the next level.

Power, a basic necessity in smart cities, scores relatively well in our assessment as compared to the other parameters. Several cities have round-the-clock power supply and efficient metering systems with facilities for online bill payment. Kochi and Ludhiana have accelerated to the top position from last year in the power race, with a consolidated score of 8.47 and 8.3 respectively, owing to various progressive initiatives and reforms undertaken by city authorities.

Water, another significant component, has huge scope for improvement across most cities assessed. Noida, Bhubaneswar and Delhi hold the top spots in this area, while Jaipur, Kolkata, Pune and Chandigarh need to reassess and set up suitable mechanisms for ensuring adequate availability, metering and other services.

With respect to municipal corporation services for citizens and businesses, such as online certificate registrations, license issuance and online approval of building plans, these services are fairly effective in many regions, with Noida, Kochi, Ludhiana and Ahmedabad in the lead. However, cities such as Jaipur and Pune need an overhaul in their service delivery mechanisms to ensure better comfort and convenience for citizens.

There is much emphasis on transport domain reforms in all cities, with city administrators having planned corrective measures for increasing multimodal transport as well as ensuring seamless interconnectivity. Bangalore and Indore are surging ahead with projects in online ticketing, bus fleet management and MIS system.

Disaster management is a critical component and here, Kochi, Indore and Dehradun have emerged as this year's frontrunners in terms of disaster management initiatives. Most cities lag behind in disaster management, and city authorities must make this one of their top priorities.

With regard to other urban infrastructure, most cities, notably Hyderabad with a score of 4.67, also lag behind in waste management as well as sewerage and sanitation. The government has undertaken a nationwide cleanliness campaign, Swachh Bharat, in order to propagate the culture of cleanliness among citizens. Also, several regulatory measures are being taken to have effective waste management mechanisms in place.

As far as social infrastructure is concerned, providing a sense of security to citizens is a key element of the smart city initiative and surveillance technology infrastructure augmentation needs to be made a top priority across all cities assessed in this report.

Additionally, several cities need to catch up on the health and safety fronts. Noida leads in health and safety. With regard to education, emphasis must be laid on increasing the number of government schools and institutions, with a focus on building schools for differently abled children.

The tremendous enthusiasm and endeavours of the administrators of these cities in leading them towards the new era of smart and sustainable cities are truly remarkable. On completion of the benchmark assessment, the city administrators and policymakers now need to carefully examine their city's readiness to take the next leap of transformation and accordingly articulate policy and regulations. We have consolidated few key pointers that can help in empowering the start-to-smart journeys of these cities.

### Clear definition of leadership roles

A governance model with clearly defined leadership roles needs to be established to work around the complex city administrative structure. Administrations need to be accountable and responsive to their citizens, transparent in their reporting on the use of public resources and in decision-making, and create opportunities for participation in policy as well as service delivery.

### Setting up of municipal services supervisory body at the state level

An independent supervisory body needs to be set up at the state level in order to counsel, regulate, monitor and arbitrate, at the desired levels, the roles and responsibilities of all utility providers at the city levels. Cities may establish a nodal agency that will work together with city officials and policymakers in order to ensure that municipal strategies and urban planning targets are completely aligned with the city's overall smart and sustainable vision. This agency will be able to drive active collaboration and can serve as the single window for all stakeholders. Bhubaneswar, Orissa, the top contender in Round I has already set up an SPV and appointed a CEO

### Active involvement of the private sector

The private sector has always been considered a receptacle of innovation and efficiency, the two key ingredients for bringing any smart, sustainable city's vision to life. Businesses are expected to usher in new and innovative technological solutions and services. Not just large global companies but also innovative start-ups and local players will play a critical role. The creative solutions and approaches of the former and the local understanding and connect of the latter will work to their advantage and create an equation of mutual gain for both businesses and citizens.

There is a need for governments to work closely with the private sector on innovative solutions and create an enabling environment with respect to transparent policies and ease of licencing in order to accelerate planning and development works on major infrastructure projects that will help in developing business cases and investment options. To reduce risks such as community risk (acceptance from local population) and scope risk (change, increase or cancellation of scope), early involvement of both the private sector and citizens is required.

#### **Shift in approach from PPP to PPPP**

City governments need to change their outlook towards PPP projects and should convert them into people-private-public-partnership (PPPP) projects which take into account the citizens' involvement in the urbanisation process. The participation of citizens in the design of the city will play a key role in the development and progression of the city.

#### **Opening up data for transparency and service delivery**

Open data helps in ensuring transparency across systems, driving the participation of citizens in governance and improving service delivery by virtue of leveraging data for the welfare of people at large. With open data, governments may fuel the set-up of groundbreaking services and businesses that render commercial and social value. Additionally, open data will facilitate coordination among multiple departments and increase the visibility of city coordinates for the delivery of services.

#### **Define the land monetisation framework**

In order to determine the value of land and tackle issues related to land values, a clear framework needs to be designed. However, the framework needs to be transparent and

accountable with due attention to the needs of the poor and marginalised sections.

#### **Determine user charges to cover operation and maintenance (O&M) costs**

In order to effectively cover O&M costs incurred, an appropriate level of user charges must be determined and levied for all measurable services where beneficiaries are easily identifiable. Ideally, a structure where higher levels of consumption exist, a higher tariff needs to be charged.

#### **Monitoring and measuring success**

Tracking outcomes is essential to the success of any smart city implementation. Governments should engage with citizens, stakeholders and the private sector to identify key city metrics and the data required to assess performance. This data will be critical in the design of targeted policies, reforms and capital investments, and to measure the effectiveness of these actions and consequently to ensure the success of the smart city initiative.

With the final list of 109 smart cities being announced by GoI and proposals for 33 cities already selected, the Smart City Mission is now rapidly surging ahead towards success. As per the mission guidelines for smart cities released by the Ministry of Urban Development, a clean and sustainable environment will be a significant feature of the upcoming smart cities. Cities have to be engines of economic growth that provide equal opportunities for prosperity. They also have to be liveable, connected, efficient, healthy, safe, inclusive, affordable and climate resilient. Successfully embedding these tenets of sustainability into smart city plans will require clear articulation of the role of ICT in achieving the city's vision, urban development benchmarks, responding to the needs of citizens and

other stakeholders, and supporting the required governance structure.

Strengthened by central government's financial support, policy support, legal backing and capacity-building support, the selected city administrators need to manage their finances effectively and manage the city's key programmes and projects, its performance risks and assets, including the human capital employed in performing its functions. All of this must be done in a way that is sustainable and through collaboration and partnerships with citizens, the private sector, academia and NGOs.

A wide variety of projects have been shortlisted for adopting the smart route and, at the same time, focussing on the sustainability aspect. Some of the key priority projects are a centralised command and control system which will integrate all the city data and act as a central node to provide a host of city services and a citizen engagement platform—namely city apps and a

citizen dashboard, transit operations management for enhanced ICT-based maintenance and monitoring, including smart parking, public information systems, smart multi-mobility cards, area-based traffic control, and traffic mobile app; water supply management through smart metering and leak identification system (supervisory control and data acquisition/ advanced metering infrastructure); safety management through CCTV surveillance; emergency response mechanism; solid waste management system, including GPS-enabled garbage vehicle tracking and mobile app based cleanliness monitoring.

Each selected city, with its own vision and plan, now needs to work together with various stakeholders and define what 'progress' will mean over the course of implementing its plan. Measurable key performance indicators (KPIs) with corresponding targets and time frames will have to be

defined and monitored continuously and the ensuing progress will have to be transparently reported and communicated to all the stakeholders.

It is important for city administrators to take stock of the report's assessment results, which indicate a substantial gap in various areas, such as safety, sewerage and sanitation, sustainability, storm water drainage, solid waste management and transport. Cities also need to take cognisance of their readiness before embarking on the 'smart' journey. In addition, while undertaking city development initiatives, city administrators also need to roll out capacity-building measures in order to acquaint the general public with the mechanisms and benefits of the smart solutions at their disposal. Moreover, they need to have inter-departmental cohesiveness as well as harmony for driving ICT initiatives.

# About The Express Group

The Express Group is one of India's largest media conglomerates, with a wide selection of publications and a network of offices spread across India. Today, with 32 national editions, 13 publication centres and 4 language dailies that reach over 19 million people daily, the Express Group stands tall among the country's media houses. The Express Group of publications has stood for excellence in journalism for over 80 years. The Express Group publications include The Indian Express, The Financial Express, Loksatta, Lokprabha, Screen and Jansatta.

Established in 1990, the Business Publications Division (BPD) of the group manages B2B publications like Express Computer, Express Pharma, Express Healthcare, Express TravelWorld, Food and Hospitality World and events across varied sectors, including information technology.

## **About Express Technology Sabha**

Organised twice a year for the last eight years by the Indian Express Group, the Express Technology Sabha, since its inception as India's premier eGovernance Forum, has been setting new benchmarks in eGovernance seminars through leadership dialogues, exciting case studies and best practices, peer-to-peer networking opportunities, and technology showcases. The Sabha aims to gather key practitioners of ICT within the government to hold deliberations on ideas that can lead to the development of a more transparent and efficient governance mechanism.

The Express Technology Sabha has consolidated its position as a niche forum for senior government IT leaders and their peers to exchange ideas, assimilate concepts and share knowledge on varied technology issues that are significant and unique to the community. The three-day residential conference explores new trends and innovations that are transforming strategic priorities and enabling superior eGovernance programmes that add value to citizens.

## **About Express Computer**

Express Computer is one of India's most respected IT media brands and has been in publication for 24 years. The magazine covers enterprise technology in all its flavours, including processors, storage, networking, wireless, business applications, cloud computing, analytics, green initiatives and anything that can help companies make the most of their ICT investments. The magazine is also at the forefront of reporting on eGovernance in India.

The goal of the magazine is to bring to its primary readers—the CIOs/CTOs and senior IT decision makers and implementers across various industries and government departments—the most comprehensive, topical, incisive and unbiased coverage through a carefully chosen mix of news, views, analysis and in-depth feature articles.
